## Summary

While spending over four years in healthcare finance, I had the opportunity to build my technical skillset in querying large databases, testing large projects, and understanding the many facets of a large business. During that time I realized those technical skills—and technology as a whole—were my favorite part of my work. I've since decided to reorient my career towards web and software development.

### Languages

HTML  
CSS  
Javascript  
MySQL & PL/SQL  
MongoDB

### Frameworks/Libraries

JQuery  
AngularJS  
Node.js  
Express.js  
Bootstrap  
Typescript  
Less

### Skills

Object-oriented programming  
Debugging  
Site deployment  
API building and utilization

## Projects

### Blog

account creation, secure password handling, session tracking  
a user can create, edit, and delete their own blog posts

### E-commerce Store

automatically updating storefront attached to a MySQL database  
live-tracking cart  
handles secure credit card transactions
